Subject: Scientific Report Approval, STSM title “Big Data and Scalable Crowdsourcing towards fostering the Language Skills of European Citizens (BiCSkill)”

To whom it may concern,

Herewith, I confirm the Dr. Mahdi Bohlouli has visited Web2Learn in the frame of Enetcollect cost action. During his visit, we had productive brainstorming about the role of Machine Learning (ML) in conjunction with the crowdsourcing with the aim of language learning. We already realized potential topics and areas for further and future collaborations. All of these have been summarized in already submitted scientific report.

In connection to his prepared scientific report, I hereby approve the report as it is and am ready to support his and your future needs in this regard.

For any further question, please do not hesitate to ask me.

Yours truly,
Katerina Zourou, Ph.D
