

PYBOSSA

Overview

scifabric

Give your data a purpose

Scifabric can help you enrich, analyze & mine your data!

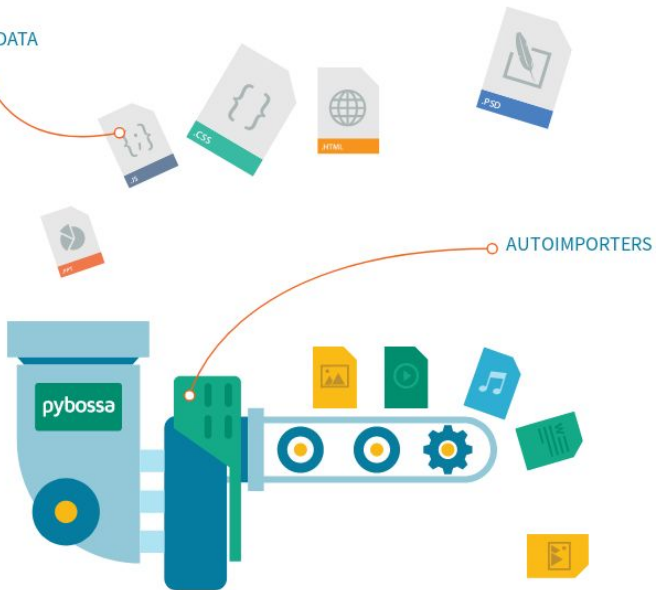

scifabric

How it works

Well, that is a bunch of data!

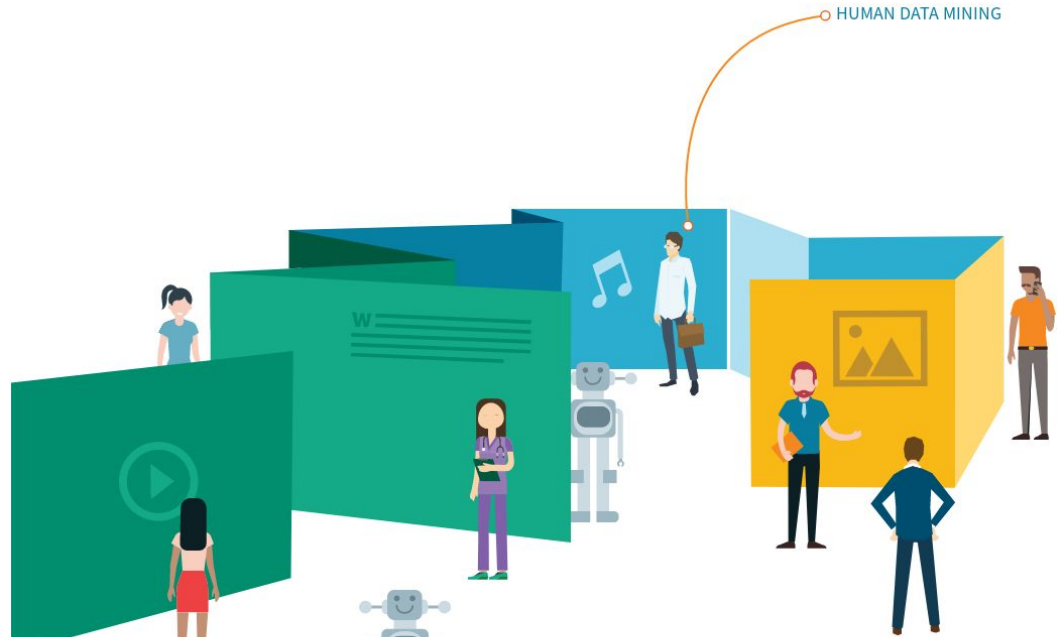

We've seen it before. You own tons of raw data, and you know that it can become something really valuable. You may not know exactly what to do with it, or you just don't know how to do it. Either way, we're here for you.

YOUR DATA

Scifabric to the rescue!

We'll design the project you need, give it a purpose. First things first, Scifabric provides autoimporters for all that data.

HUMAN DATA MINING

All your data analysed in real time and turned into indexable info

The statistic analysis is something you cannot achieve managing PYBOSSA on your own. This is what adds value to us as a company when developing a project just for you. And all this with our higher standards of security

Data that you can now use!

Flexibility is our second name! Remember we can develop anything specially for you. So take a look at our projects, see what we've been up to and be sure we can adjust to your very needs.

PYBOSSA workflow

Project

Task

Task Runs

Result

Search Engine

Project sends tasks
To contributors

Contributors submit
Task Runs with their
analysis

Consensus results are
generated and can be
pushed anywhere

When a task is
completed, webhooks
notify in real-time for
statistical analysis

Translation of keyword dictionaries into local languages

Collection of relevant data from social media information

HASHTAGS

Images, Audio, Video, PDFs... content enrichment

Geolocalization of images, audio, documents, etc.
